## Introduction

V2 Unified + V3 SDK Version: Mac and Windows 3.6.11098.2

V4 SDK Version: Windows 4.2.1009.0, Mac 4.2.804.0

V3V4 Adapter Version: Windows 4.2.984.0, Mac 4.2.134.0

**Note:** The SDK embedded in this ESAP version has been tested and qualified to interoperate with an extensive list of endpoint security applications covering most products listed in the supported products list.

## Interoperability and Supported Platforms

Please refer to the **ESAP Supported Platforms Guide** for supported versions of browsers and operating systems in this release.

## Noteworthy Changes

- Pulse Secure introduced support for consuming the latest OPSWAT SDK Version 4 in 8.2R5 PCS and PPS 5.3 R5 PPS release.
  - OPSWAT SDK's are bundled within our Endpoint Security Assessment Plugin (ESAP). From ESAP 3.0.3 onwards, OPSWAT V4 SDK for Windows and Mac are packaged alongside existing V2 and V3 SDKs.
  - Uploading ESAP 3.0.3 or Later on PCS 8.2R4 and below or PPS 5.3R4 and below release will continue to install and leverage the older Version 2 and Version 3 OPSWAT SDKs. There will be no change in the functionality/usage on PCS 8.2R4 / PPS 5.3R4 and below release versions.
  - Uploading ESAP 3.0.3 or later on PCS 8.2R5 PCS or PPS 5.3R5 releases, we will install OPSWAT V4 SDK version along with V2 and V3 SDKs.
  - On the PCS 8.2R5 and PPS 5.3R5 Admin UI, Administrators have a choice to select whether OPSWAT V3 or V4 SDK will be consumed on the device running PCS 8.2R5 or PPS 5.3R5. Please refer to the section "Activating the OPSWAT SDK Version" in the PCS 8.2R5 and PPS 5.3R5 Administration Guide available on [Techpubs](#) website for more information.

## Upgrade Issues in ESAP3.0.7

### OPSWAT:

1. “Spyware Terminator 3.x” is replaced with the correct name, “Spyware Terminator (AntiSpyWare) 3.x” under list of available AntiSpyWare products. Upgrade from ESAP 2.1.7 or lower fails if an AntiSpyWare policy is configured and “Spyware Terminator 3.x” is selected. To successfully upgrade to ESAP 2.2.6 or greater, unselect the product. After the upgrade, you can select “Spyware Terminator (AntiSpyWare) 3.x”. This doesn’t result in any loss of functionality.
2. G Data Notebook 20.x is not supported in ESAP 1.8.0 or greater. Upgrade from ESAP 1.7.5 or lower fails if an Antivirus or an Antispyware policy is configured and GData Notebook 20.x is selected. To successfully upgrade to ESAP 1.8.0 or greater, unselect the product.
3. G Data Internet Security 22.x of Firewall is renamed to G Data Firewall 22.x. Upgrade from ESAP 1.7.5 or lower fails if a Firewall policy configured and G Data Internet Security 22.x is selected. To successfully upgrade to ESAP 1.7.6 or greater, unselect the product and select ‘G Data Firewall 22.x’. There is no loss of functionality.
4. AntiSpyWare of Kaspersky Anti-virus for Windows Workstations 6.x is renamed to Kaspersky Anti-virus for Windows Workstations 6.x [AntiSpyWare]. Upgrade from ESAP 1.6.4 or lower fails if an Antispyware policy is configured where “Require Specific Products” is checked and Kaspersky Anti-virus for Windows Workstations 6.x is selected. To successfully upgrade to ESAP 1.6.5 or greater, unselect the product and select Kaspersky Anti-virus for Windows Workstations 6.x [AntiSpyWare]. There is no loss of functionality.
5. Upgrade from ESAP 1.5.2 or older fails if a firewall policy is configured where “Require Specific Products” is checked and McAfee Desktop Firewall (8.0) is selected. The upgrade doesn’t fail if McAfee Desktop Firewall (8.0.x) is selected. To successfully upgrade to ESAP 1.5.3 or greater, unselect McAfee Desktop Firewall (8.0) and select McAfee Desktop Firewall (8.0.x). This doesn’t result in any loss of functionality.

### Shavlik:

1. The following note applies only to the patch assessment functionality. When upgrading ESAP from a 1.5.1 or older release to the current release, the services on the SA or IC device needs to be restarted for the binaries on the endpoint to be automatically upgraded. (470003, 491073)

## Known Issues/Limitations in ESAP3.0.7

### OPSWAT:

1. Remediation of Windows Firewall 8 in agentless mode requires administrative privileges and UAC should be turned off. (958840, 845980)

2. Endpoint Protection 11.x/12.x is not performed when UAC is enabled or if the scan logs have been deleted or if system scans has never been performed. (502783)
3. The password protection option in the Sunbelt Kerio Firewall product is not supported. (495041)
4. Remediation and detection of Windows Firewall 7 and Vista in agentless mode requires administrative privileges and UAC to be turned off.
5. For Symantec Hosted Endpoint Protection 2.x installed on server operating systems, GetLastFullSystemScanTime function will return either the last full system scan time or last quick system scan time. Server operating systems include, Server 2008, Server 2008 R2, Server 2003 and XP x64.
6. FS RTP status for avast! Free Antivirus 7.x will not be detected until user manually configures FS RTP status at least once. That is, user should turn off "File System Shield" and turn it on. (785223)
7. Signatures cannot be downloaded with Trend Micro Officescan Client 10.5 and 10.6. Therefore the remediation functionality for failing the virus definition check is not supported for Trend Micro Officescan Client 10.5 and 10.6. This is because the executable required to support this functionality is not bundled as part of the TrendMicro product. (950123)
8. Microsoft's API, will only report the drives which the system has access to. Therefore BitLocker Drive Encryption to detect the drive, the drive should be in "unlock" state. (PRS-318680)
